

MOHAMAD ELYOUSSEF

IT Networking & Security | Cybersecurity | Network Automation & AI

Ajman, United Arab Emirates | +971 56 976 1028 | mohamadelyoussef08@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

PROFESSIONAL SUMMARY

IT Networking & Security student at Ajman University (graduating Jan 2027), currently interning at e& through the Bidayati Programme in the Network Automation & Orchestration department. Building an AI-powered Security Incident Classification and Response Assistant using Transformer models and Python automation. Hands-on experience spanning penetration testing, full-stack development, and enterprise network design.

INTERNSHIP EXPERIENCE

e& (Etisalat) — Bidayati Internship Programme

Network Automation & Orchestration Department | Internship

Sharjah, UAE

May 2026 – Present

Python, Transformer Models, Network Automation, Security Operations

- Developing an AI-powered Security Incident Classification and Response Assistant using Python and Transformer models to analyze, classify, and prioritize security alerts at scale.
- Designing an automated remediation recommendation engine that maps classified threats to response playbooks based on severity level and incident type.
- Automating network diagnostics workflows and structured incident reporting within e&'s enterprise infrastructure environment.
- Applying ML-based threat classification pipelines in a real-world security operations context inside a major regional telecommunications provider.

EDUCATION

Ajman University — Ajman, UAE

Sep 2022 – Jan 2027 (Expected)

Bachelor of Science in Information Technology — Networking and Security

Relevant Coursework: Network Fundamentals, Cybersecurity, Cloud Computing, Database Systems, Operating Systems, Web Technologies, Mobile Application Development, Ethical Hacking.

Al Ma'arifa International Private School — UAE

2014 – 2022

High School Diploma

TECHNICAL SKILLS

Cybersecurity & Pen-Testing: Kali Linux, Metasploit Framework, Burp Suite, Nmap, Wireshark, Nessus, Suricata, LLMNR Poisoning, Vulnerability Assessment, CTF Challenges

Network Automation & Scripting: Python (Networking), REST APIs, Paramiko, Bash, Cisco Packet Tracer

Networking: LAN/WAN Design, VLAN Segmentation, Subnetting (VLSM), Routing & Switching, VPN (Hub-and-Spoke), HSRP/VRRP, QoS, Firewall Configuration

Cloud & Virtualization: AWS EC2, IAM, Security Groups, AWS Cloud Foundations, AWS Cloud Operations, VirtualBox, VMware

Programming: Python, Java, Kotlin, R, JavaScript, TypeScript, C#, SQL, Bash, HTML/CSS

Frameworks & Tools: FastAPI, React, PostgreSQL, Docker (fundamentals), GitHub, Android Studio, Jetpack Compose, Linux, Windows Server

Soft Skills: Problem Solving, Teamwork, Time Management, Critical Thinking, Fast Learner

PROJECTS & PRACTICAL EXPERIENCE

Uniclass Scheduler — Automated University Course Scheduling System

Ajman University (Capstone)

Full-Stack Developer | FastAPI, React 19, TypeScript, PostgreSQL, Google OR-Tools

Spring 2026

- Built a full-stack university timetabling system that solves an NP-hard constraint-satisfaction problem using Google OR-Tools CP-SAT solver, generating conflict-free schedules in seconds for realistic university datasets.
- Designed a Python FastAPI REST API with JWT authentication and role-based access control, backed by a PostgreSQL relational database with a clean ORM layer.
- Developed a React 19 + TypeScript frontend with an interactive weekly schedule grid, manual-edit capability, and unscheduled-section conflict resolution suggestions for administrators.

- Delivered multi-format schedule export (PDF, DOCX, Excel) and automated handling of hard constraints including room capacity, instructor availability, and time-slot uniqueness.

Multi-Target Red Team Assessment — Enterprise Exploitation & Post-Compromise Analysis

Ajman University

Penetration Tester | Kali Linux, Metasploit, Nmap, Burp Suite, Wireshark, Responder

Spring 2026

- Executed a structured penetration test against three target environments (Metasploitable Linux, Windows XP, Windows 7), successfully exploiting 6 critical vulnerabilities across all systems.
- Achieved remote SYSTEM-level code execution via MS08-067 (CVE-2008-4250) and MS17-010 EternalBlue (CVE-2017-0143) on unpatched Windows SMB services without authentication.
- Exploited a VSFTPD v2.3.4 supply-chain backdoor (CVE-2011-2523) to obtain root shell access and confirmed default-credential risk via SSH brute-force on Metasploitable.
- Executed client-side attacks including a malicious HTA payload delivery and LLMNR poisoning with NTLMv2 hash capture and offline cracking followed by an SSH lateral movement pivot.
- Produced a professional penetration test report documenting full attack chains, CVE references, risk ratings, and prioritized remediation recommendations.

Network Design & Management — TechNova Solutions

Ajman University

Lead Network Designer | Cisco Packet Tracer, VLAN, VPN, HSRP/VRRP, QoS

- Architected a scalable, secure WAN/LAN infrastructure supporting up to 150 concurrent users across three UAE branches using a three-tier hierarchical topology (Core, Distribution, Access).
- Delivered 99.95% target uptime by integrating dual-homed ISPs, redundant multilayer switches/routers, and First-Hop Redundancy Protocols (HSRP/VRRP).
- Optimized mission-critical app performance with a 10 Gbps backbone and QoS policies prioritizing VoIP and video traffic at sub-50ms latency.
- Hardened the environment with perimeter firewalls, VLAN segmentation, MFA, and a Class C IP scheme using VLSM for efficient address allocation.

AWS EC2 Cloud Lab

Ajman University

Cloud Practitioner | AWS EC2, IAM, Security Groups

- Provisioned virtual servers on AWS EC2 with hardened security groups, key-pair access, and least-privilege IAM roles.
- Deployed and configured web services on Linux instances and validated network reachability and access controls.

Car Maintenance Reminder — Android Application

Ajman University

Mobile Developer | Kotlin, Jetpack Compose, Android Studio, SQL

- Designed and built a Kotlin/Android app that tracks and schedules vehicle maintenance with service reminders, mileage logs, and push notifications.
- Implemented a clean Jetpack Compose UI with reliable local persistence and tested for smooth performance and notification reliability across devices.

Web Development Projects

Ajman University

Full-Stack Developer | HTML, CSS, JavaScript, XML

- Built dynamic, responsive web applications including an e-commerce prototype with login, user tracking, shopping cart, cookies, and session management.

CERTIFICATIONS & COURSES

Certified in Cybersecurity (CC) — ISC2 / Coursera

Mar 2026

Google Cybersecurity Professional Certificate — Google / Coursera

Dec 2025

Advanced Relational Database and SQL — Coursera

Mar 2026

IoT, Wireless & Cloud Computing Emerging Technologies — Yonsei University

Mar 2026

Getting Started with Python for Data Science — ZAKA

Dec 2025

AWS Academy Graduate — Cloud Operations — Amazon Web Services

May 2025

AWS Academy Graduate — Cloud Foundations — Amazon Web Services

Mar 2025

Introduction to Networking and Storage — IBM

Mar 2024

Understanding Basic SQL Syntax — Coursera

Nov 2024

ACTIVITIES & ACHIEVEMENTS

- Active member, Ajman University IT Club — participated in coding battles, hackathons, and CTF competitions hosted with Dubai Police Academy.

- Capture The Flag (CTF) Participant — solved exploitation, cryptography, and forensics challenges using Kali Linux and Burp Suite.
- Attended GITEX Global 2025 and Digital Dubai industry visits — engaged with cybersecurity and AI leaders from Cisco, AWS, Microsoft, Huawei, NVIDIA, and e&.
- Completed all 13 learning pathways in the Android Development with Kotlin program by Google for Developers.

LANGUAGES

Arabic — Native

English — Fluent (Professional Working Proficiency)
